- Computer-Assisted Learning (1985)
- Computer-Based Learning (1980)
- Computer-Assisted Instruction (1960)

TSUNAMI HAZARD ZONE

**IN CASE OF MOOC GO
TO HIGH GROUND OR INLAND**

MOOCs = Massive Open Online Courses

xMOOCs

- Lectures + Assignments
- Strict Schedule
- Certification

cMOOCs

- Social interaction, crowdsourcing
- YouTube, web2.0
- Free and open content

MOOCs = Massive Open Online Courses

- **xMOOCs** [2012]

- The best lecturers
- From the best universities
- Focused on contents
- High workload
- A course is the unit
- Classical pedagogy
- Strict schedule
- Certification

Skinner

- **cMOOCs** [2008]

- YouTube attention span
- Free access to contents
- Many small revenues
- Anytime, anywhere
- Social software
- Community effects
- Crowdsourcing
- Learning analytics

Vygotsky

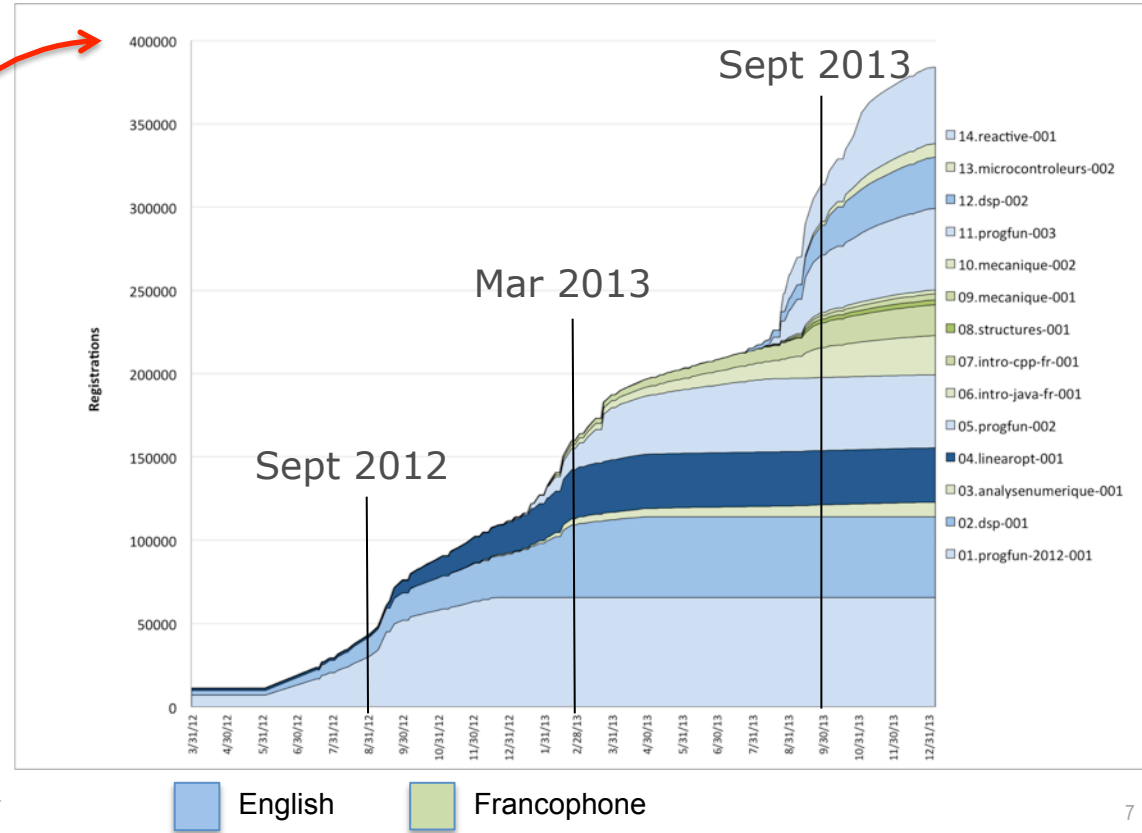

Piaget

MOOCs = Massive Open Online Courses

Ten EPFL professors

400'000

students in a year

What are EPFL's motivations to do MOOCs ?

- Visibility and reputation

Unique Selling Proposition

- Enhance teaching

Internal & Africa

- Continued education

Video Lectures

- Getting Started
 - Course Introduction (2:44)
 - Tools Setup for Linux (12:24)
 - Tools Setup for Mac OS X (12:17)
 - Tools Setup for Windows (10:37)
 - Tutorial: Working on the Programming Assignments (8:47)
- Week 1: Functions & Evaluations
 - Lecture 1.1 - Programming Paradigms (14:32)
 - Lecture 1.2 - Elements of Programming (14:25)
 - Lecture 1.3 - Evaluation Strategies and Termination (4:22)
 - Lecture 1.4 - Conditionals and Value Definitions (8:49)
 - Lecture 1.5 - Example: square roots with Newton's method (11:25)
 - Lecture 1.6 - Blocks and Lexical Scope (8:00)
- Week 2: Higher Order Functions
 - Lecture 2.1 - Tail Recursion (12:32)
 - Lecture 2.2 - Higher-Order Functions (10:18)
 - Lecture 2.3 - Currying (14:58)
 - Lecture 2.4 - Example: Finding Fixed Points (10:46)
 - Lecture 2.5 - Scala Syntax Summary (4:13)

Scala course, Prof. Martin Odersky

Anatomy of a MOOC

- A course segmented into weeks
- Short Videos (5 x 7-12 minutes)

For example, the following definition of sum is equivalent to the one with the nested sumF function, but shorter:

```
def sum(f: Int => Int)(a: Int, b: Int): Int =  
  if (a > b) 0 else f(a) + sum(f)(a + 1, b)
```

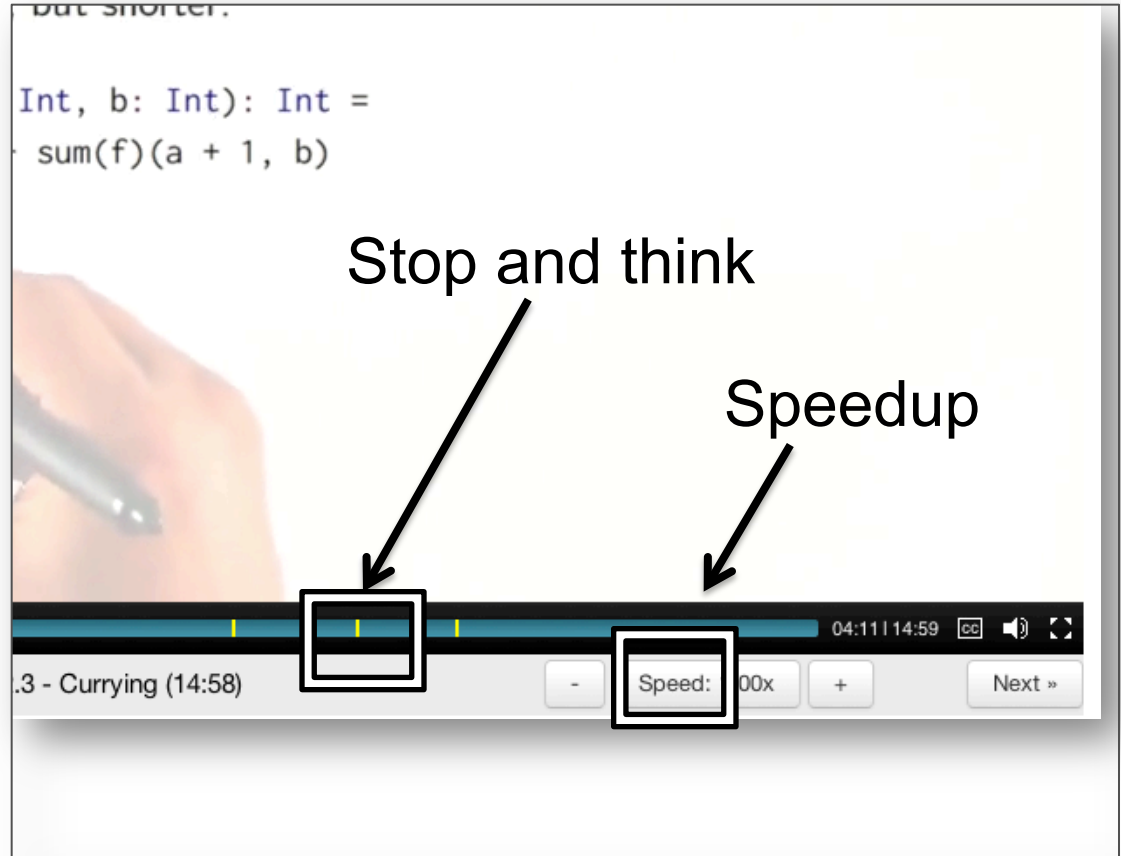

Sum

A hand holding a black marker is pointing to the word "Sum" written in blue ink on a white surface.

« Previous Press H for keyboard shortcuts Lecture 2.3 - Currying (14:58) - Speed: 1.00x + Next »

Anatomy of a MOOC

- A course segmented into weeks
- Short Videos (5 x 7-12 minutes)
- Speed control and inline quizzes

The image shows a video player interface with a hand holding a pen pointing at the video content. The video content displays code: `Int, b: Int): Int =` and `sum(f)(a + 1, b)`. The video player controls include a progress bar, a speed control button labeled "Speed: 1.00x", and a "Next" button. Two annotations are present: "Stop and think" with an arrow pointing to a yellow marker on the progress bar, and "Speedup" with an arrow pointing to the speed control button.

```
Int, b: Int): Int =
sum(f)(a + 1, b)
```

Stop and think

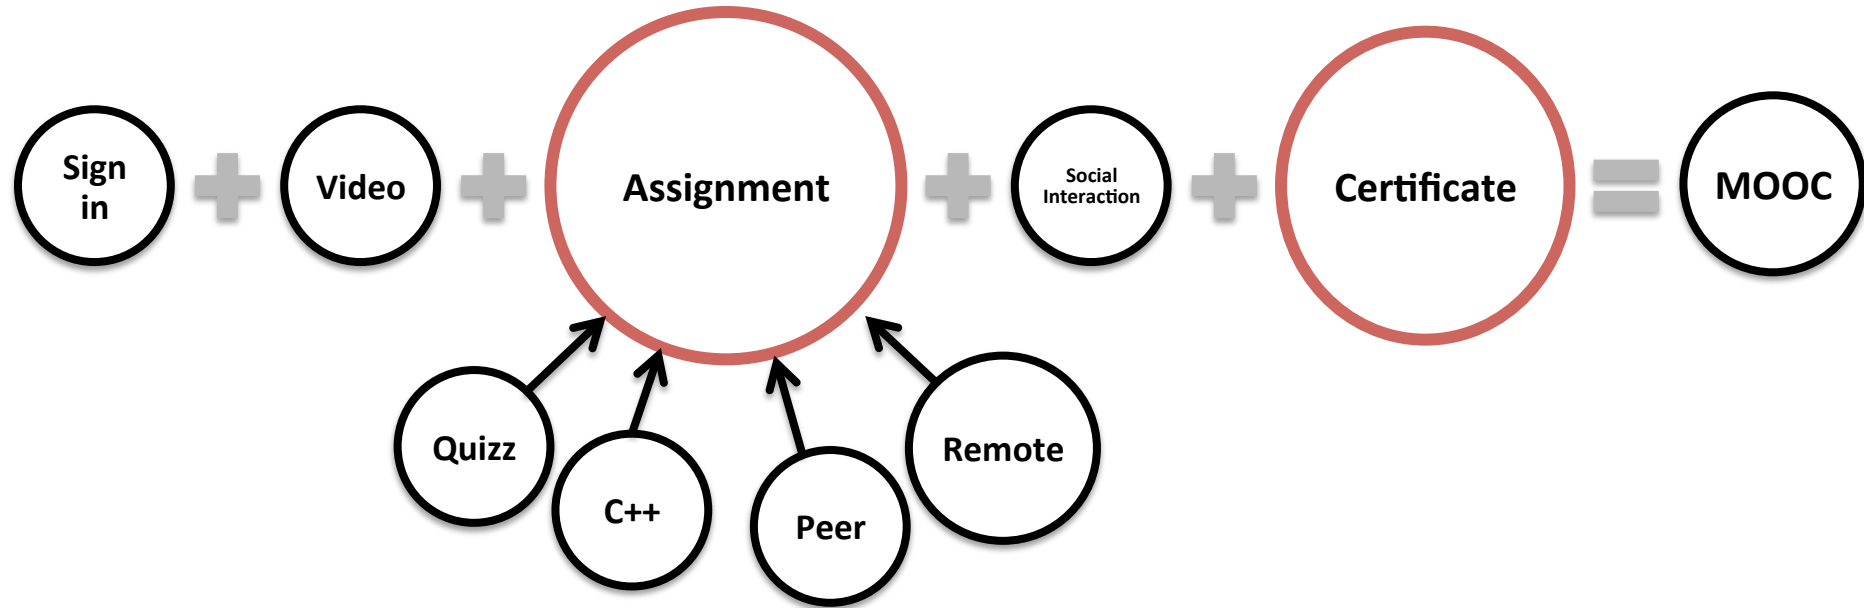

Speedup

04:11 | 14:59

Speed: 1.00x

Evaluation & Certification

Peer Assessment

- Address complex skills
- Assessing = Learning
- Possible to use external tools
e.g. www.bibsonomy.org
- Too much peer assessment
kills peer assessment

Certification [“Pay to get Out”]

- Better certificate = More expensive
 - Statement of accomplishment
 - Signature track
 - American Council on Education (ACE)
 - University Degree

Learning together

A propos des Meetups Everywhere Coursera

13 086 COURSERIANS 1 449 VILLES

Learning for life.
Education for everyone.

Coursera Meetups are a great way to meet your fellow Courserians, swap stories, share ideas, form study groups, and have a great time.

Find a meetup near you, or start a new one. These events are for you, by you, so meet wherever you like. You choose the topic, the time and the venue.

Current State of MOOCs at EPFL

Platforms

The screenshot shows the Coursera website interface. At the top, there's a navigation bar with 'coursera | Explore Courses', 'Categories', 'Partners', 'About', and 'Patrick Jermann'. Below this is a large banner image of a modern building at night. The EPFL logo and name 'École Polytechnique Fédérale de Lausanne' are prominently displayed. Below the banner, there are three course cards, each with a code snippet and a title:

- Initiation à la programmation (en Java)** (Sep 17th 2013):

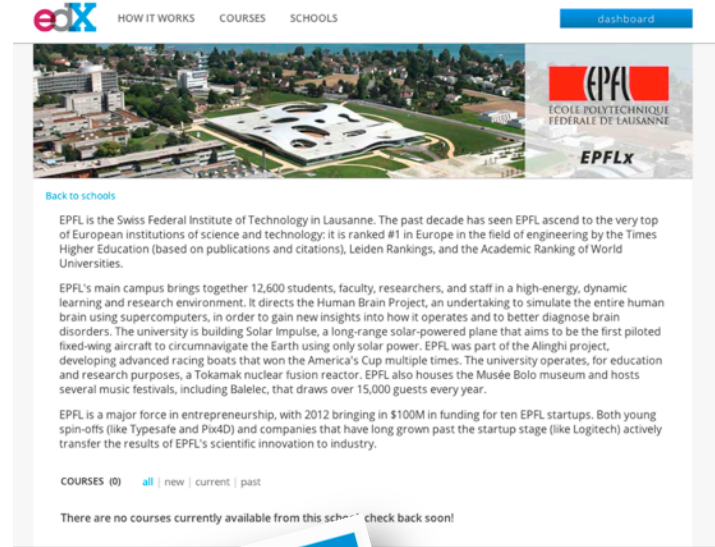

```
class HelloWorld {  
    static void main(String[] args) {  
        System.out.println("Hello, World");  
    }  
}
```
- Initiation à la programmation (en C++)** (Sep 17th 2013):

```
int main()  
{  
    cout << "Hello world" << endl;  
    return 0;  
}
```
- Introduction à la programmation orientée objet (en C++)** (Feb 17th 2014):

```
class Complexe  
{  
public:  
    Complexe(const double re, const  
             Complexe& C);  
    Complexe operator+(const Complexe& C);  
};
```

Below these are more course cards, including one for Java and another for C++ with a heatmap visualization.

coursera

The screenshot shows the edX website interface. At the top, there's a navigation bar with 'edX', 'HOW IT WORKS', 'COURSES', 'SCHOOLS', and a 'dashboard' button. Below this is a large banner image of the EPFL campus. The EPFL logo and name 'ÉCOLE POLYTECHNIQUE FÉDÉRALE DE LAUSANNE' and 'EPFLx' are prominently displayed. Below the banner, there's a 'Back to schools' link and a paragraph of text:

EPFL is the Swiss Federal Institute of Technology in Lausanne. The past decade has seen EPFL ascend to the very top of European institutions of science and technology; it is ranked #1 in Europe in the field of engineering by the Times Higher Education (based on publications and citations), Leiden Rankings, and the Academic Ranking of World Universities.

EPFL's main campus brings together 12,600 students, faculty, researchers, and staff in a high-energy, dynamic learning and research environment. It directs the Human Brain Project, an undertaking to simulate the entire human brain using supercomputers, in order to gain new insights into how it operates and to better diagnose brain disorders. The university is building Solar Impulse, a long-range solar-powered plane that aims to be the first piloted fixed-wing aircraft to circumnavigate the Earth using only solar power. EPFL was part of the Alinghi project, developing advanced racing boats that won the America's Cup multiple times. The university operates, for education and research purposes, a Tokamak nuclear fusion reactor. EPFL also houses the Musée Bolo museum and hosts several music festivals, including Balelec, that draws over 15,000 guests every year.

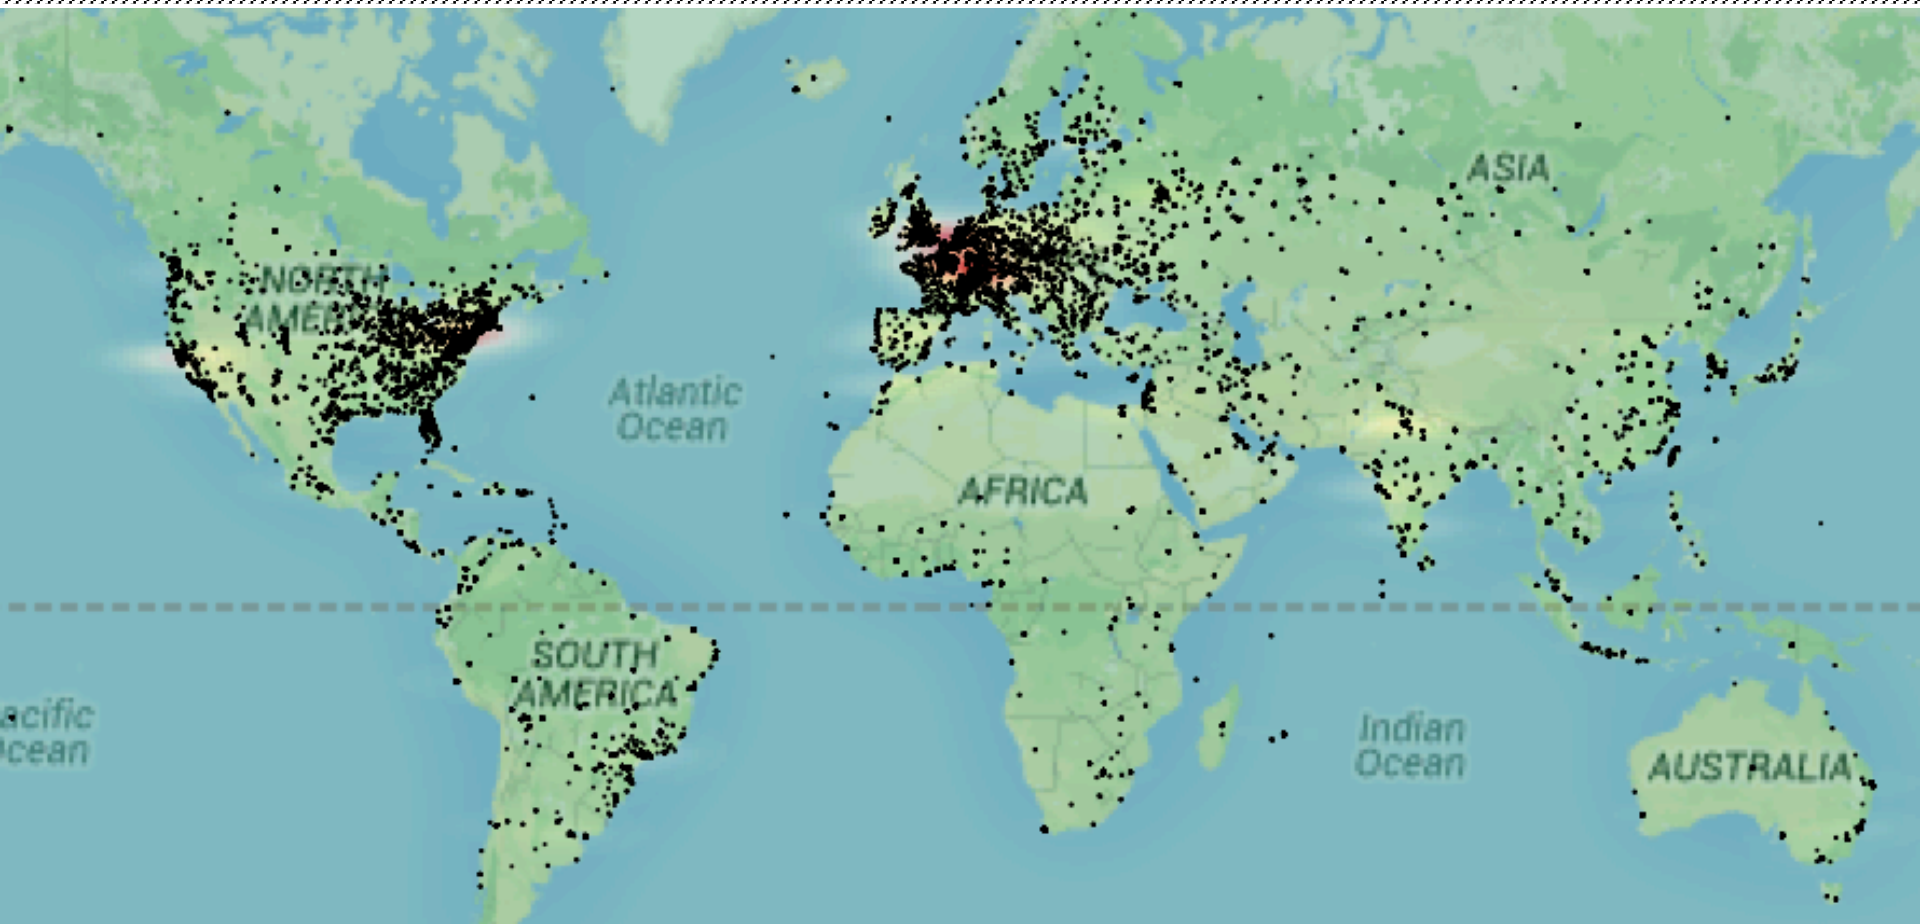

EPFL is a major force in entrepreneurship, with 2012 bringing in \$100M in funding for ten EPFL startups. Both young spin-offs (like Typesafe and Pix4D) and companies that have long grown past the startup stage (like Logitech) actively transfer the results of EPFL's scientific innovation to industry.

Integration

MOOC 100% on line

I have finally understood triggers !

I will add this MOOC to my CV

Thanks!

Great!

Please add subtitles

On campus course evaluations

[N=6 courses, 287 ratings, 316 comments]

- Overall positive ratings (61%)
 - Good quality
 - Useful for learning
 - Complement to lecture
 - Replay
 - Flexible schedule
- But there are issues (39%)
 - Need social interaction
 - Recitation section design
 - Quality
 - Match between video and exercise

Course formats ... After the tsunami

- Status quo (bachelor ?)

- Have a ex cathedra lecture
- Propose the video as an optional complement
- Students use the video as an open resource

+ does not require self-directed students

- decouples the online and on campus moocs

- Flipped classroom

- Mandatorily watch video before the class
- Organize sessions to deepen knowledge
- Best format has to be optimized
- Students are better prepared for exercises

+ More effective learning

- Costly in human coaching and logistics

The MOOC

Studio

Rationale

- The teachers are the drivers
 - We provide a **template** and teachers prepare their slides
 - We **coordinate** the production
 - We setup the studio and teachers record alone
- Supporting “Presence”
 - Teachers’ image on the slides at the beginning and at the end
 - Pointer and Invisible Hand Effect during explanations
- Inform design with research

François Gallaire

First of all, a human adventure

Paolo Germano

Yves Perriard

Three (complementary) design philosophies

- Instructional design
 1. Start from course objectives
 2. Define learning outcomes
 3. Design learning activities
- Content based
 - Start from list of chapters and sections
 - Cut the material into small pieces
- Product based **BESTSELLER**
 - Start from the elements of the MOOC
 - 7 times 5 videos of 12 minutes
 - 7 assignments & 7 quizzes
 - 1 mid-term exam and 1 final exam
- Questions I ask teachers ...
 - What is special about your course ?
 - What kind of assignments do you do ?
 - Are you using simulations ? Demonstrations ?
 - Do you want to grade exercises ?
 - How will the MOOC be used on campus ?
 - Who is the course for ?
 - What language ?
- Things I give them
 - Production schedule
 - Powerpoint & Latex template

- Every week
 - 1 Assignment = Homework = Grades
 - N Exercises = Learning = No grades
- Exams
 - Mid-term (in week 4-5)
 - Final exam (in week 8)
- Grading policy
 - Determine early on what weight is given to Assignments and Exams in the final grade, e.g. 1/3 for assignments + 1/3 mid-term + 1/3 final
- Multiple Choice Questions
 - ⇒ invite teachers to seminar about designing MCQ
- Programming Assignments
 - ⇒ automatic correction needs to be developed by the prof's team
 - ⇒ Coordinate with the platform engineers early on
- Peer-Assessments
 - ⇒ Rubric design is requires careful design
 - ⇒ Settings are tricky (malus for not participating, how many corrections are required by student ?)

- Two shots (mise en slide ~ mise en scène)
 1. Full Shot (with and without title)
 2. Split Shot
- Components
 - Video of the professor
 - Handwriting
 - Figures, images and formulas
 - Additional videos
- 16:9 format !

This is the professor's picture

Typical Video Scenario (7-12 minutes)

1. Welcome (Full shot with professor, Split shot with TOC)

- Explain what the lesson is about

2. Development / Example (1/2 or full shot of content)

- Develop explanations => Explain by handwriting
- Illustrate theory with examples => Include videos
- Use contrasting cases => Side by side examples

3. Add interactivity

- Ask questions before giving answers => Quizzes
- Give a short task to do => Stop the video and resume

4. Conclusion / Goodbye (Full Shot)

- Summary
- Introduction to exercises

Sample => Welcome (Full Shot)

Sample => Introduction / Summary (Split shot)

- Salutation and Goodbye
- Split Shot with professor + content
 - Look straight into the camera
 - Use this shot when you address the audience directly. For example when you salute, or when you say goodbye.
 - You have to know your text by heart.
- Use it also to encourage, or for transitions, to conclude an explanation.

Sample => Explanations (Split shot)

- Referring and explaining
- Split Shot with professor profile
 - Look at the iMac (screen placed on the side of the camera)
 - This will result in a 2/3 shot that gives the impression that the teacher is looking at the content.
- For Bullets and Video
 - Use this shot when commenting static content (an image, graphics, a schema) or a video

Sample => Complementary representations

Notation	$\mathcal{N}(\boldsymbol{\mu}, \boldsymbol{\Sigma})$
Parameters	$\boldsymbol{\mu} \in \mathbb{R}^k$ – location $\boldsymbol{\Sigma} \in \mathbb{R}^{k \times k}$ – covariance (nonnegative-definite matrix)
Support	$\mathbf{x} \in \boldsymbol{\mu} + \text{span}(\boldsymbol{\Sigma}) \subseteq \mathbb{R}^k$
PDF	$ 2\pi\boldsymbol{\Sigma} ^{-\frac{1}{2}} e^{-\frac{1}{2}(\mathbf{x}-\boldsymbol{\mu})'\boldsymbol{\Sigma}^{-1}(\mathbf{x}-\boldsymbol{\mu})}$, exists only when $\boldsymbol{\Sigma}$ is positive-definite
CDF	(no analytic expression)
Mean	$\boldsymbol{\mu}$
Mode	$\boldsymbol{\mu}$
Variance	$\boldsymbol{\Sigma}$
Entropy	$\frac{1}{2} \ln 2\pi e\boldsymbol{\Sigma} $
MGF	$\exp\left(\boldsymbol{\mu}'\mathbf{t} + \frac{1}{2}\mathbf{t}'\boldsymbol{\Sigma}\mathbf{t}\right)$
CF	$\exp\left(i\boldsymbol{\mu}'\mathbf{t} - \frac{1}{2}\mathbf{t}'\boldsymbol{\Sigma}\mathbf{t}\right)$

Sample => Handwritten Content (Full shot)

$t_n = nh \quad n=0, 1, 2, \dots$ Calculer u^n de $u(t_n)$

À partir de $u^0 = u_0$ on va calculer u^1, u^2, \dots, u^{n+1}) méthode de marche en temps.

Schéma d'Euler progressif: $\frac{u^{n+1} - u^n}{h} = f(u^n, t_n)$

origine? on écrit l'éq. diff. temps t_n : $\dot{u}(t_n) = f(u(t_n), t_n)$ on utilise une formule de diff. finies progressive par approx $\dot{u}(t_n)$ chap 2

$$\frac{u(t_{n+1}) - u(t_n)}{h} = f(u(t_n), t_n) + O(h) \text{ on remplace } u(t_n) \text{ par } u^n$$

avantage: schéma explicite: $u^{n+1} = u^n + h f(u^n, t_n)$ facile à programmer

inconvénient
