Phenolic glycosides
Glycosylation
Salireposide
Populosides A, B, C
Protective group cleavage

#### Abstract

The total synthesis of certain natural phenolglycosides of the family Salicaceae, namely: salireposide, populosides $A, B$, and $C$ and not occurring in plants desoxysalireposide ( $2-(\beta-D-g l u c o p y r a n o s y l o x y$ )-benzylbenzoate) and per-acetate of iso-salireposide (2-( $\beta$-d-glucopyranosyloxy)-5-benzoyloxy benzyl alcohol), starting from readily available phenols and glucose was accomplished. A simple method for the synthesis of phenolglycosides derivatives of 2-acyloxy salicyl and gentisyl alcohol was developed. The key step of these natural products' synthesis is a selective removal of acetyl groups in the presence of other acyl groups.

## 1. Introduction

Phenolglycoside derivatives of 2-acyloxy salicyl alcohol are widespread in plants of the family Salicaceae. Most phenolglycosides of this family contain salicin moiety (2-( $\beta$-d-glucopyranosyl-oxy)-benzyl alcohol). These natural compounds cover a large spectrum of biological activity. Phenolic glycosides are some of the most abundant secondary metabolites known in plant tissues, and play an important role as anti-herbivore defenses in the Salicaceae. ${ }^{1,2}$ Salireposide (1) has antiviral activity, ${ }^{3}$ and antitumor activity. ${ }^{4,5}$ It could be useful for arthritis therapy ${ }^{5}$ and shows an inhibitory activity against snake-venom phosphodiesterase. ${ }^{6}$ Populosides A (2), B (3), and C (4) exhibit antioxidant activity. ${ }^{7}$ These compounds are also potential candidates for acute or chronic opisthorchiasis treatment.

Salireposide was found out in many plants. ${ }^{8-13}$ Populosides A, B, and C were first isolated from Populus davidiana in $2006,{ }^{7}$ and populoside A was also isolated from Populus ussuriensis. ${ }^{14}$

However, despite the fact that phenolglycosides, derivatives of 2-acyloxy salicyl alcohol are well-known as natural compounds, there is no mentioning on the synthesis of these glycosides in the literature to date. Thus, the present work's aim is to synthesize some phenolglycosides inaccessible from natural sources (Fig. 1).

It was found that salireposide (1) cannot be selectively obtained by direct benzoylation of salirepin (2-( $\beta$-D-glucopyranosyloxy)-

[^0]5-hydroxy benzyl alcohol), since a mixture of acylated products was formed. In addition, it is known that benzoylation of glycosides firstly goes to the C-6 hydroxy group of the glucose residue ${ }^{15,16}$ rather than alcohol hydroxyl of the aglycone.

The present paper reports on the first synthesis of salireposide and 2-acyl analogs of salicin and salirepin: populosides A, B, C, desoxysalireposide and per-acetate of artificial iso-salireposide-4-benzoyloxy-salicin. The suggested method allows to obtain phenolglycosides, derivatives of 2-acyloxy salicyl alcohol in a selective way.

## 2. Results and discussion

Salicylic aldehyde (5) or 4-O-acetyloxy salicylic aldehyde (6a) and 4-O-benzoyloxy salicylic aldehyde ( $\mathbf{6 b}$ ) were used as initial substrates (Scheme 1). Aldehydes 6a, 6b were obtained by selective formylation of monoacyl-hydroquinone (7a,7b), which in turn can be easily obtained by hydroquinone acylation. ${ }^{17}$
$\alpha$-D-Acetobromglucose (ABG) was employed as a donor of a carbohydrate residue in the glycosylation reaction. Glycosylation of 5 was carried out under Koennigs-Knorr conditions in aqueous acetone with an equimolar amount of $\mathrm{NaOH}^{18}$ to produce glycoside 8. Unfortunately, this method proved to be unsuited for $\mathbf{6 a}$ and $\mathbf{6 b}$ glycosylation, since acyl group of the aglycone was removed and, consequently, several isomeric glycosides were formed. Therefore, for 6a and $\mathbf{6 b}$ glycosylation another way of the Koennigs-Knorr method was applied. This method avoids the aquatic environment, using quinoline and silver oxide. Although

Figure 1. Structure of synthesized phenolglycosides.

Scheme 1. Synthesis of 2-acyl phenolglycosides. Reagents and conditions: (a) $\mathrm{Ac}_{2} \mathrm{O}, \mathrm{AcOH}, 2 \mathrm{~h}, 110^{\circ} \mathrm{C}$; (b) $\mathrm{BzCl}, \mathrm{NaOH}, \mathrm{H}_{2} \mathrm{O} 1 \mathrm{~h} 40 \mathrm{~min}, 5{ }^{\circ} \mathrm{C}$; (c) $\mathrm{CF}_{3} \mathrm{COOH}$, hexamethylentetramine, $1 \mathrm{~h}, 80^{\circ} \mathrm{C}$; (d) acetobromglucose, NaOH , acetone $24 \mathrm{~h}, 20^{\circ} \mathrm{C}$; (e) acetobromglucose, $\mathrm{Ag}_{2} \mathrm{O}$, quinoline, $1 \mathrm{~h}, 20^{\circ} \mathrm{C}$; (f) $\mathrm{NaBH}_{4}, \mathrm{CTMABr}^{\circ} \mathrm{CHCl}_{3}, \mathrm{H}_{2} \mathrm{O}$, $2 \mathrm{~h}, 20^{\circ} \mathrm{C}$; (g) acyl chloride of proper acid (benzoyl chloride, 4-acetoxy cinnamoyl chloride or 4-acetoxy-3-methoxy cinnamoyl chloride), pyridine, $\mathrm{CHCl}_{3}, 24 \mathrm{~h}, 20^{\circ} \mathrm{C} ;(\mathrm{h}) 36 \%$ $\mathrm{HCl}, \mathrm{CHCl}_{3}$, EtOH (1:1:3), 24-48 h, $20^{\circ} \mathrm{C}$.
a number of side-reactions take place, ${ }^{19}$ glycosides 9 and 10, respectively, were obtained by higher yields rather than employing aqueous acetone. Both methods produce glycosides of $\beta$ configuration.

Further aldehyde groups of glycosides $\mathbf{8 , 9}$, and $\mathbf{1 0}$ were reduced by sodium borohydride using cetyltrimethylammonium bromide (CTMABr) as a phase transfer catalyst in chloroform-water system. ${ }^{20}$ The reaction proceeds at ambient temperature with almost quantitative yields. The best results were obtained when using CTMABr in quantities of $1 \% \mathrm{~mol}$ of the substrate. ${ }^{21}$ Sodium borohydride in water or alcohol solvents without any phase transfer catalysis condition ${ }^{22}$ was found to be unsuited, because complete removal of acetyl groups takes place, which, as a result, requires re-acetylation.

Reduced glycosides $\mathbf{1 1}$ and $\mathbf{1 2}$ were subjected to acylation with benzoylchloride in pyridine to produce desoxysalireposide tetraacetate $\mathbf{1 4}$ and salireposide pentaacetate 15 , respectively.

Glycosides 16, 17, and 18, were synthesized in the same way, applying acylation of compounds $\mathbf{1 1}$ and $\mathbf{1 2}$ with the acyl chloride of convenient acid. ${ }^{23}$

Selective cleavage of acetyl groups in the presence of benzoyl is possible if the $\mathrm{H}_{2} \mathrm{SO}_{4}$-acetone ${ }^{24}$ system is applied, but cleavage of benzoyl group is still significant. The best results were obtained by using $\mathrm{HBF}_{4}-\mathrm{MeOH}^{25}$ and $\mathrm{HC} 1-\mathrm{MeOH}^{26,27}$ systems. However, the
application of these systems is limited for compounds containing acid-labile acyl groups instead of benzoyl one. Thus, for selective removal of acetyl groups in presence of benzoyl we applied the following system: HCl (aqueous solution, $\rho=1.18 \mathrm{~g} / \mathrm{mL}$ )-EtOH (96\%)-chloroform in a molar ratio of HCl -glycoside 54:1 and the concentration of HCl in ethanol-chloroform mixture (volume ratio $3: 1) 2.4 \mathrm{~mol} / \mathrm{L}$ at the ambient temperature for 48 h .

The reaction at the ambient temperature resulted in a successful cleavage of protective acetyl groups not only for glycoside 13, 14, and 15, containing benzoyl group, but also for 16,17 , and 18 , containing 4 -acetoxy cinnamoyl and 4 -acetoxy-3-methoxy cinnamoyl groups, respectively, without significant cleavage of these groups and without breaking the glycosidic bond. Yet, it was observed that benzoyl group has a high resistance to hydrolysis under these conditions, as compared to 4 -acetoxy cinnamoyl and 4 -acet-oxy-3-methoxy cinnamoyl groups. Also, when monitoring the reaction by HPLC, ethyl esters of 4-acetoxy-3-methoxy cinnamic and 4 -acetoxy cinnamic acids were detected. The formation of benzoic acid or ethylbenzoate in the case of substances $\mathbf{1 3}, \mathbf{1 4}$, and $\mathbf{1 5}$ was not significant.

It was established that glycosides' anomerization and configuration change did not occur under the described conditions. Chemical shifts of anomeric carbon atoms for both glycosides (101.4-104.1 ppm, depending on the solvent), and their per-acetates
(97.0-99.8 ppm) in ${ }^{13} \mathrm{C}$ NMR spectrum correspond to chemical shifts of anomeric carbon atoms for glycosides of $\beta$-configuration. ${ }^{28}$ Phenolglycosides 1-4 are identical with naturally-occurring glycosides according to published data. ${ }^{29,7}$ Also compound $\mathbf{1}$ was isolated from Populus tremula bark using the method described in literature, ${ }^{7}$ and physicochemical characteristics of natural and synthetic samples were identical.

We found out that the selective deacetylation reaction does not cause acyl groups migration, as it corresponds to the base conditions. ${ }^{32}$ To prove this, synthetic glycosides were re-acetylated to yield compounds with physicochemical characteristics identical to original acetates. ${ }^{30,31}$

In conclusion, we have developed a simple synthetic pathway for some natural phenolglycosides derivatives of salicyl and gentisyl alcohols involving simple and readily accessible starting materials such as glucose and hydroquinone or salicylic aldehyde. The developed scheme allows obtaining glycosides of $\beta$-configuration regioselectively. Also investigation of these latter issues is currently in progress.

## 3. Experimental

### 3.1. General experimental procedures

Melting points, which are uncorrected, were determined using a Kofler hot stage apparatus. UV spectroscopic data were obtained with SF-102 spectrophotometer. IR spectra were recorded with IR Fourier spectrophotometer Spectrum BX II using KBr disks. The ${ }^{1} \mathrm{H}$ and ${ }^{13} \mathrm{C}$ NMR spectra were recorded on Bruker-300 MMX spectrometer at 300 and 75.5 MHz , respectively, in $\mathrm{CDCl}_{3}$, DMSO- $d_{6}$ and MeOD- $d_{4}$ with TMS as an internal standard and $\mathrm{Cr}(a \mathrm{acac})_{3}$ as a relaxant. The chemical shifts are given in $\delta(\mathrm{ppm})$ and the spin-spin coupling constants (J) in hertz. GC-MS analysis was performed using Aligent 7890A/5975C GC/MSD instrument, electron energy 70 eV . The ion source temperature was $230^{\circ} \mathrm{C}$, with the quadrupole temperature $150^{\circ} \mathrm{C}$ and evaporator temperature $315^{\circ} \mathrm{C}$, employing a $30.000 \times 0.25 \mathrm{~mm} \times 0.25 \mu \mathrm{~m} \quad \mathrm{HP}-5 \mathrm{MS}$ fused-silica capillary column. Helium was used as carrier gas at a constant flow of $1 \mathrm{~mL} / \mathrm{min}$ and an inlet temperature of $315^{\circ} \mathrm{C}$. The column temperature mode: 2 min at $150^{\circ} \mathrm{C}, 150-315^{\circ} \mathrm{C}$ $\left(20^{\circ} \mathrm{C} / \mathrm{min}\right)$, and 25 min at $315^{\circ} \mathrm{C}$. TLC was performed using plates Silufol-UV 254 and Sorbfil-UV 254 using benzene-ethanol 9:1 (method A) or chloroform-methanol 4:1 (B) mixtures as eluents. HPLC analysis was carried out with the liquid chromatographer Agilent Compact LC with column $150 \times 4.6$ Exlips Plus C-18 ( $5 \mu \mathrm{~m}$ ). Analysis was performed using $0.1 \%$ trifluoroacetic acid in $\mathrm{H}_{2} \mathrm{O}-\mathrm{CH}_{3} \mathrm{CN}$ as mobile phase, at gradient elution (from $0 \%$ to $100 \%$ $\mathrm{CH}_{3} \mathrm{CN}$ in 20 min ) at a flow rate of $1 \mathrm{~mL} / \mathrm{min}$. Probe volume was $20 \mu \mathrm{~L}$. UV detection was performed at 220 nm . Accurate mass measurement was performed on an Agilent 1200 series LC system coupled with an Agilent 6210 TOF mass spectrometer. Silica gel MN Kieselgel $600.04-0.063 \mathrm{~mm}$ was used for column chromatography. Commercially available solvents were used after drying with $\mathrm{CaCl}_{2}$.

### 3.2. 2-(2,3,4,6-Tetra-O-acetyl- $\alpha$-D-glucopyranosyloxy)bromide (ABG)

Was obtained according to the method described, in lit. ${ }^{3}$ and additionally recrystallized from $\mathrm{Et}_{2} \mathrm{O}$. Yield $58 \%, \mathrm{mp} 88^{\circ} \mathrm{C}$.

### 3.3. Monoacetylhydroquinone (7a)

Was obtained according to the method ${ }^{17}$ by acetylation of hydroquinone with acetic anhydride. Yield $56 \%$; mp $49-50^{\circ} \mathrm{C}$; ${ }^{1} \mathrm{H}$

NMR $\left(\mathrm{CDCl}_{3}, 300 \mathrm{MHz}\right) \delta: 2.28\left(3 \mathrm{H}, \mathrm{s}, \mathrm{COCH}_{3}\right) ; 6.67(2 \mathrm{H}, \mathrm{d}$, $J=7.8 \mathrm{~Hz}, \mathrm{H}-2, \mathrm{H}-6) ; 6.86(2 \mathrm{H}, \mathrm{d}, J=8.1 \mathrm{~Hz}, \mathrm{H}-3, \mathrm{H}-6) .{ }^{13} \mathrm{C}$ NMR $\left(\mathrm{CDCl}_{3}, 75.5 \mathrm{MHz}\right) \delta: 21.1\left(\mathrm{CH}_{3}, \mathrm{COCH}_{3}\right) ; 116.4(\mathrm{C}-2, \mathrm{C}-6) ; 122.3$ (C-3, C-5); 143.7 (C-4); 153.7 (C-1); 171.2 (C, $\mathrm{COCH}_{3}$ ). MS m/z $152[M]^{+}(19), 110$ (100), 43 (55).

### 3.4. Monobenzoylhydroquinone (7b)

To 11.44 g ( 0.104 mol ) of hydroquinone dissolved in 120 mL 0.43 n . $\mathrm{NaOH}(0.052 \mathrm{~mol})$ cooled to $5^{\circ} \mathrm{C}$. Six milliliters of ( 0.052 mol ) benzoylchloride was drop-added for 1 h while agitating the solution at $5^{\circ} \mathrm{C}$. The mixture was stirred at this temperature for 40 min . The precipitate was filtered, washed with saturated solution of $\mathrm{NaHCO}_{3}$ and water. Recrystallization from toluene gave light brown crystals, yield 4.34 g (39\%); mp 162$163^{\circ} \mathrm{C}$, lit. ${ }^{33} 163^{\circ} \mathrm{C} .{ }^{1} \mathrm{H}$ NMR $\left(\mathrm{CDCl}_{3}, 300 \mathrm{MHz}\right) \delta: 6.80(2 \mathrm{H}, \mathrm{d}, \mathrm{H}-$ $6, J=8.7 \mathrm{~Hz}, \mathrm{H}-2) ; 7.03(2 \mathrm{H}, \mathrm{d}, J=8.7 \mathrm{~Hz}, \mathrm{H}-3, \mathrm{H}-5) ; 7.51(2 \mathrm{H}, \mathrm{m}$, H-10, H-12); 7.64 ( $1 \mathrm{H}, \mathrm{m}, \mathrm{H}-11$ ); 8.19 ( $2 \mathrm{H}, \mathrm{d}, \mathrm{J}=8.1 \mathrm{~Hz}, \mathrm{H}-9, \mathrm{H}-$ 13). ${ }^{13} \mathrm{C}$ NMR $\left(\mathrm{CDCl}_{3}, 75.5 \mathrm{MHz}\right) \delta: 116.8$ (C-2, C-6); 122.7 (C-5, C-3); 128.7 (C-10, C-12); 130.3 (C-8, C-9, C-13); 133.80 (C-11); 144.2 (C-4); 153.9 (C-1); 165.9 (C-7).

### 3.5. 2-Hydroxy-5-acyloxy benzaldehyde (6a, 6b). General method

To 0.01 mol of monoacylhydroqinone ( $\mathbf{7 a}$ or $\mathbf{7 b}$ ), dissolved in 20 mL trifluoroacetic acid, 0.04 mol of hexamethylenetetramine was added, and the mixture was stirred at temperature $80^{\circ} \mathrm{C}$ for 1 h . The reaction mixture was diluted with $60 \mathrm{~mL} 0.35 \% \mathrm{HCl}$ and extracted with $\mathrm{CHCl}_{3}(3 \times 30 \mathrm{~mL})$. The extracts were combined, washed with saturated NaCl , water, dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$, subjected to flash column chromatography, and evaporated.

### 3.5.1. 2-Hydroxy-5-acetyloxy benzaldehyde (6a)

Recrystallization from water gave (6a) as white needles (37\%): $\mathrm{mp} 78-79^{\circ} \mathrm{C}$. IR ( $\mathrm{KBr}, v_{\text {max }} / \mathrm{cm}^{-1}$ ): $3075(\mathrm{OH}) ; 1766(\mathrm{C}=0) ; 1674$ (HC=O) 1587 (Ar); 1488 (Ar); 1373 (C-H); 1224 (C-O-C); 1142, 1015(C-O); 913 (C-H); 834 (Ar), 710 (Ar). ${ }^{1} \mathrm{H}$ NMR ( $\mathrm{CDCl}_{3}$, $300 \mathrm{MHz}) \delta: 2.30\left(3 \mathrm{H}, \mathrm{s}, \mathrm{COCH}_{3}\right) ; 6.97(1 \mathrm{H}, \mathrm{d}, J=8.7 \mathrm{~Hz}, \mathrm{H}-6$,$) ;$ $7.22(1 \mathrm{H}, \mathrm{dd}, J=2.7,9.0 \mathrm{~Hz}, \mathrm{H}-5$, ); 7.31 ( $1 \mathrm{H}, \mathrm{d}, J=2.7 \mathrm{~Hz}, \mathrm{H}-3$ ); $9.83(1 \mathrm{H}, \mathrm{s}, \mathrm{CHO}) .{ }^{13} \mathrm{C}$ NMR ( $\left.\mathrm{CDCl}_{3}, 75.5 \mathrm{MHz}\right) \delta: 20.9\left(\mathrm{CH}_{3}\right.$, $\left.\mathrm{COCH}_{3}\right) ; \quad 118.7(\mathrm{C}-2) ; \quad 120.1(\mathrm{C}-6) ; \quad 125.4(\mathrm{C}-3) ; \quad 130.66(\mathrm{C}-5)$; 142.93(C-4); 159.18(C-1); 169.46(C, $\left.\mathrm{COCH}_{3}\right) ; 195.80(\mathrm{CHO})$. ### 3.5.2. 2-Hydroxy-5-benzoyloxy benzaldehyde (6b)

Recrystallization from water gave ( $\mathbf{6 b}$ ) as white needles (27\%): mp 109-110 ${ }^{\circ} \mathrm{C}$. IR ( $\mathrm{KBr}, v_{\max } / \mathrm{cm}^{-1}$ ): 3063 ( OH ); 2863 (CH); 1734 (CO); 1665 (HC=O) 1627, 1587 (Ar); 1479, 1451 (Ar); 1371 (C-H); 1231 (C-O-C); 1061(C-O); 911 (CH); 714 (Ar). ${ }^{1} \mathrm{H}$ NMR $\left(\mathrm{CDCl}_{3}, 300 \mathrm{MHz}\right) \delta: 7.04(1 \mathrm{H}, \mathrm{d}, J=8.7 \mathrm{~Hz}, \mathrm{H}-6)$; 7.37 ( $1 \mathrm{H}, \mathrm{dd}, J=8.7,2.4 \mathrm{~Hz}, \mathrm{H}-5$ ); 7.46 ( $1 \mathrm{H}, \mathrm{d}, J=2.4 \mathrm{~Hz}, \mathrm{H}-3$ ); 7.50 ( $2 \mathrm{H}, \mathrm{m}, \mathrm{H}-10, \mathrm{H}-12$ ); 7.64, ( $1 \mathrm{H}, \mathrm{m}, \mathrm{H}-11$ ); 8.18, ( $2 \mathrm{H}, \mathrm{m}$, $\mathrm{H}-9, \mathrm{H}-13)$; 9.88 ( $1 \mathrm{H}, \mathrm{s}, \mathrm{COH}$ ). ${ }^{13} \mathrm{C}$ NMR ( $\left.\mathrm{CDCl}_{3}, 75.5 \mathrm{MHz}\right) \delta$ : 118.8 (C-2); 120.3 (C-6); 125.6 (C-3); 128.7 (C-10, C-12); 129.0 (C-5); 130.2 (C-9, C-13); 130.9 (C-8); 133.9 (C-11); 143.3 (C-4); 159.4 (C-1); 165.3 (C7); 195.8 (CHO). MS m/z $242[\mathrm{M}]^{+}$(5), 105 (100), 77 (35).

### 3.6. 2-(2,3,4,6-Tetra-O-acetyl- $\beta$-d-glucopyranosyloxy)benzaldehyde (helicin tetraacetate) (8)

Was obtained from (5) according to the method described. ${ }^{18}$ Yield $16 \%, \mathrm{mp} 142-143^{\circ} \mathrm{C}$. IR ( $\mathrm{KBr}, v_{\text {max }} / \mathrm{cm}^{-1}$ ): 2964, 2777 (C-H); 1762 (C=O), 1685 (HC=O); 1602 (Ar) 1484 (Ar); 1378, 1367 (C-H); 1234 (C-O) 1071, 1041 (C-O); 909 (C-H); 764 (Ar). ${ }^{1} \mathrm{H}$ NMR
(DMSO-d $\left.{ }_{6}, 300 \mathrm{MHz}\right) \delta: 1.99,2.01,2.02\left(4 \times 3 \mathrm{H}, \mathrm{s}, \mathrm{COCH}_{3}\right) ; 4.09$ (1H, m, H-5'); 4.20-4.32 (2H, m, H-6'a, H-6'b); 5.02 ( $1 \mathrm{H}, \mathrm{m}, \mathrm{H}-$ $\left.4^{\prime}\right) ; 5.16\left(1 \mathrm{H}, \mathrm{m}, \mathrm{Hz}, \mathrm{H}-3^{\prime}\right) ; 5.43\left(1 \mathrm{H}, \mathrm{t}, J=9.3 \mathrm{~Hz}, \mathrm{H}-2^{\prime}\right) ; 5.70(1 \mathrm{H}$, d, $J=7.8 \mathrm{~Hz}, \mathrm{H}-1^{\prime}$, ) ; $7.20(2 \mathrm{H}, \mathrm{m}, \mathrm{H}-4, \mathrm{H}-6) ; 7.72(2 \mathrm{H}, \mathrm{m}, \mathrm{H}-3, \mathrm{H}-$ 5); $10.15(1 \mathrm{H}, \mathrm{s}, \mathrm{CHO}) .{ }^{13} \mathrm{C}$ NMR (DMSO- $\left.d_{6}, 75.5 \mathrm{MHz}\right) \delta: 20.3$ $\left(4 \times \mathrm{COCH}_{3}\right) ; 61.5\left(\mathrm{C}-6^{\prime}\right) ; 67.9\left(\mathrm{C}-4^{\prime}\right) ; 70.5\left(\mathrm{C}-2^{\prime}\right) ; 70.9\left(\mathrm{C}-5^{\prime}\right)$; 71.5(C-3'); 97.2(C-1'); 115.9(C-6); 123.1(C-4); 124.9(C-2); 127.5 (C-3); 136.3(C-5); 158.3(C-1); 169.3, 169.5, $169.9\left(4 \times \mathrm{COCH}_{3}\right)$; 189.1(CHO).

### 3.7. 2-(2,3,4,6-Tetra-O-acetyl- $\beta$-d-glucopyranosyloxy)-5-acyloxy benzaldehyde $(9,10)$. General method

To a mixture of 7 mmol compound $\mathbf{6 a}$ or $\mathbf{6 b}$ and 7 mmol ABG in 3 mL quinoline was added $7 \mathrm{mmol} \mathrm{Ag}_{2} \mathrm{O}$, and the mixture was stirred until thickening and kept for 1 h under room temperature. The reaction mixture was diluted with $20 \mathrm{~mL} \mathrm{CHCl}_{3}$, centrifuged ( $10 \mathrm{~min}, 1500 \mathrm{rpm}$ ), $\mathrm{CHCl}_{3}$ was separated, washed with 0.1 M $\mathrm{H}_{2} \mathrm{SO}_{4}(3 \times 5 \mathrm{~mL})$, water, dried over $\mathrm{Na}_{2} \mathrm{SO}_{4}$, subjected to flash column chromatography, and evaporated.

### 3.7.1. 2-(2,3,4,6-Tetra-O-acetyl- $\beta$-d-glucopyranosyloxy)-5acetyloxy benzaldehyde (9)

Recrystallization from ethanol gave (9) as white needles (25\%), mp 144-146 ${ }^{\circ} \mathrm{C}$. ### 3.10. Selective acetyl group cleavage. General method

To a glycoside ( $\mathbf{1 4}, \mathbf{1 5}, \mathbf{1 7} \mathbf{- 1 9}$ ) ( 0.15 mmol ) in a mixture of $96 \%$ ethanol and $\mathrm{CHCl}_{3}$ in proportion $1.5-0.5 \mathrm{~mL}$ was added $0.5 \mathrm{~mL} 36 \%$ HCl . The reaction mixture was stirred and then kept at room temperature for a $24-48 \mathrm{~h}$. The reaction mixture was neutralized with $20 \%$-solution of $\mathrm{Na}_{2} \mathrm{CO}_{3}$ until pH 7 , evaporated to dryness and product was isolated employing column chromatography by gradient elution using chloroform and chloroform-ethanol mixture (from ratio 9:1 to 4:1). Analytical samples were purified by recrystallization from ethanol.

HRESIMS Calcd for $\mathrm{C}_{22} \mathrm{H}_{24} \mathrm{O}_{9} 455.14205$ $[\mathrm{M}+\mathrm{Na}]^{+}$. Found $455.13659[\mathrm{M}+\mathrm{Na}]^{+}$. The data agree well with those given in. ${ }^{7}$

### 3.10.6. Populoside C (4)

Yield $50 \%$, mp $107-109^{\circ} \mathrm{C}$, lit. ${ }^{7} 109-111^{\circ} \mathrm{C}$. UV $\lambda_{\max }\left(\mathrm{H}_{2} \mathrm{O}\right) / \mathrm{nm}$ : 234, 327 nm . IR (KBr, $v_{\max } / \mathrm{cm}^{-1}$ ): $3370(\mathrm{OH}) ; 2927(\mathrm{C}-\mathrm{H}) ; 1688$ ( $\mathrm{C}=\mathrm{O}$ ); 1615 (Ar) 1589, 1522, 1450 (Ar); 1285, 1241, 1185 (C-O); 1079 (C-O); 980 (C-O -C), 751 (Ar). ${ }^{1} \mathrm{H}$ NMR (DMSO-d ${ }_{6}$, $300 \mathrm{MHz}) \delta$ : $3.20-3.39\left(4 \mathrm{H}, \mathrm{m}, \mathrm{H}-2^{\prime}, \mathrm{H}^{\prime} 3^{\prime}, \mathrm{H}^{\prime} 4^{\prime}, \mathrm{H}-5^{\prime}\right)$; 3.69, 3.75 ( $2 \mathrm{H}, \mathrm{m}, \mathrm{H}-6^{\prime} \mathrm{a}, \mathrm{H}-6^{\prime} \mathrm{b}$ ); 3.81 ( $3 \mathrm{H}, \mathrm{s}, \mathrm{OCH}_{3}$ ); 4.86 ( $1 \mathrm{H}, \mathrm{m}, \mathrm{H}-1^{\prime}$ ); 5.28 (2H, m, H-7a, H-7b); 6.53 ( $1 \mathrm{H}, \mathrm{d}, J=15.9 \mathrm{~Hz}, \mathrm{H}-9$ ); $6.78(1 \mathrm{H}, \mathrm{d}$, $J=7.5 \mathrm{~Hz}, \mathrm{H}-15) ; 7.03(1 \mathrm{H}, \mathrm{m}, \mathrm{H}-16) ; 7.12(2 \mathrm{H}, \mathrm{m}, \mathrm{H}-4, \mathrm{H}-6) ; 7.33$ (3H, m, H-3, H-5, H-12); $7.58(1 \mathrm{H}, \mathrm{d}, \mathrm{J}=15.6 \mathrm{~Hz}, \mathrm{H}-10) .{ }^{13} \mathrm{C}$ NMR (DMSO-d $\left.{ }_{6}, 75.5 \mathrm{MHz}\right) \delta: 56.1\left(\mathrm{OCH}_{3}\right) ; 60.7\left(\mathrm{C}-7, \mathrm{C}-6^{\prime}\right) ; 69.7\left(\mathrm{C}-4^{\prime}\right)$; 73.3(C-2'); 76.5(C-3'); 77.1(C-5'); 101.0(C-1'); 111.2 (C-12); 114.4 (C-9); 115.0(C-6); 115.5(C-15); 121.8 (C-4); 123.3(C-16); 125.2 (C-2); 125.6(C-11); 128.7(C-3); 129.3(C-5); 145.3 (C-10); 147.9(C-14); 149.4(C-13); 155.2(C-1); 166.6(C-8). HRESIMS Calcd for $\mathrm{C}_{23} \mathrm{H}_{26} \mathrm{O}_{10} 485.14182[\mathrm{M}+\mathrm{Na}]^{+}$. Found $485.13927[\mathrm{M}+\mathrm{Na}]^{+}$. The data agree well with those given in. ${ }^{7}$

## Acknowledgements

We would like to thank Head of the Laboratory of Petrochemical Synthesis, NIOST LLC (Tomsk), Kolesnik Vasiliy Dmitrievich and operator Zamanova Margarita Karimovna for assistance in obtaining spectral data of certain compounds. This work was supported by the scientific program "Nauka" N 3060.2012.

## Supplementary data

Supplementary data $\left({ }^{1} \mathrm{H}\right.$ and ${ }^{13} \mathrm{C}$ NMR spectra of compounds $\mathbf{1 - 4}, \mathbf{6 a}, \mathbf{6 b}, \mathbf{8 - 1 9}$, IR spectra of Salireposide (1) isolated from P. tremula bark and obtained by synthetic means and UV spectra of selected compounds) associated with this article can be found, in the online version, at http://dx.doi.org/10.1016/j.carres.2012. 10.006 .
